

Governance for organisations that have no governance team.

We work with UK charities and small organisations that have no security staff and no budget for a big-four engagement. Scope and fee are agreed before anything starts.

Standards and frameworks

ISO/IEC 27001:2022	Lead auditor
ISO/IEC 42001:2023	Certified
ISO/IEC 27701	Certified
NIST CSF 2.0	Framework
EU AI Act	Reg. 2024/1689
Cyber Essentials	NCSC / IASME

What we do

IT governance, risk and compliance

Usually the trigger is a funder, insurer or corporate client asking a question you cannot answer yet. We build the risk register, the policy set and the evidence behind them, then show your team how to keep it current after we leave.

You get: Risk register, policy set, evidence pack, board summary.

AI governance

Your staff are already using AI tools, policy or no policy. The job is finding out where, deciding which of those uses need a control, and writing something short enough that people actually follow it. That is also most of what ISO/IEC 42001 and the EU AI Act ask for.

You get: Use-case register, AI risk assessments, one short usable policy.

Cybersecurity advisory

For organisations where IT is one person's half-time job. We look at what would hurt you most, fix what is cheap to fix first, and leave you a baseline you can measure against next year.

You get: Control review, staff awareness sessions, maturity baseline.

AI product launch

For teams rolling out Microsoft Copilot or a similar tool. Readiness check, tool selection, training for the people who will use it, then a look at whether it changed anything.

You get: Readiness report, rollout plan, staff training, follow-up review.

How an engagement runs

1 Free intro call

Half an hour. You describe the pressure you are under and we tell you whether we are the right people for it.

2 Scoped assessment

We review what you have, then write up where you stand and the order we would fix things in. Fixed fee, agreed first.

3 The actual work

We build the documents, run the sessions and sit in the audits with you, at whatever pace the budget allows.

Who you work with

Abiodun Alli

Founder, IT GRC and Information Security, Dartford, United Kingdom

Abiodun has spent ten years in IT governance and information security. He is a certified ISO/IEC 27001:2022 Lead Auditor and holds ISO/IEC 42001 for AI management systems and ISO/IEC 27701 for privacy, which few UK practitioners hold together. You deal with him directly, with no account manager and no junior consultant doing the work behind the scenes.

Credentials

ISO 27001:2022 Lead Auditor · ISO/IEC 42001 · ISO/IEC 27701 · CompTIA Security+ · ISC2 Certified in Cybersecurity · Certified AI Security Risk (CAISR)

Start with a free half-hour call.

Bring the question someone has asked you that you cannot yet answer.
No obligation and no charge for the call.
